

Reduce OT risk. Improve visibility. Strengthen operational resilience.

Asset Guardian helps industrial organisations gain clearer visibility and control across their Operational Technology environment, supporting better risk management, compliance and continuity.

Your Operational Technology. Secured.

The challenge

When OT asset information is incomplete or unorganised, risk becomes harder to manage.

For many industrial organisations, Operational Technology environments are complex, critical and constantly changing. Assets may be spread across multiple sites, systems and teams. Configuration information can be difficult to find. Change records may not always be consistent. In some cases, critical knowledge sits with individuals rather than being captured in a central, reliable system.

Limited visibility across OT assets and configurations

Growing compliance demands

Fragmented or outdated asset records

Slower response during outages or incidents

Increasing cyber and operational risk

Knowledge sitting with individuals instead of in a central system

Why it matters

Respond in hours, not weeks.

When an outage, cyber incident or urgent operational issue occurs, teams need fast access to accurate information. If asset data is incomplete, outdated or difficult to locate, response times can slow down. Teams may need to chase information across departments, rely on individual knowledge or manually check systems before decisions can be made.

A well-organised OT asset inventory gives teams the visibility and confidence they need to manage risk, support continuity and respond effectively when it matters most.

How Asset Guardian helps

One platform for clearer OT visibility and control.

Asset Guardian brings key OT management processes together in one integrated software platform. Instead of relying on fragmented records, disconnected tools or manual processes, organisations can build a clearer picture of their OT environment and manage critical information in a more structured way.

Maintain a clearer view of OT assets and configurations

Understand change, risk, vulnerability and lifecycle status

Capture critical asset knowledge in one central system

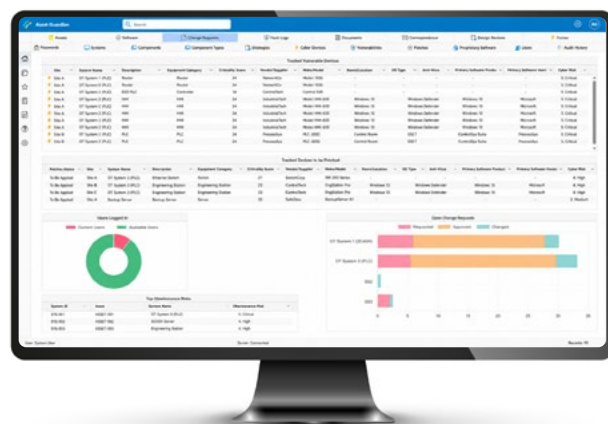

Improve accountability through structured workflows and audit trails

Support compliance, recovery and business continuity planning

Reduce manual effort and improve operational efficiency

Outcomes and value

Built to support better decisions, faster response and stronger resilience.

Reduced operational risk

Helping teams identify gaps and issues earlier.

Improved efficiency

Reducing time spent searching for information.

Greater visibility

Showing assets, configurations and changes clearly.

Knowledge gap reduction

Keeping critical asset information in one place.

Stronger compliance support

Supporting clearer records, workflows and audit trails.

Faster response

Supporting faster action during urgent events.

Value Delivered

Demonstrated value across complex OT environments.

Asset Guardian supports organisations operating in complex, highly regulated and safety-critical environments.

While named customer examples may be limited due to confidentiality and security requirements, approved outcomes and anonymised examples can help demonstrate the value Asset Guardian delivers in practice.

**\$3M+**

saved from a prevented cyber security incident for one customer.

**\$1.2M**

saved through obsolescence management for one customer.

**42 days**

average time to value.

**3,000+**

users globally.

**30+ years**

Operational Technology experience.
